

Confused Robot Skit

Jott Girn, Stephen Le, Marwan Yousef, Zesheng Chen

Our project will be a comedic skit about the journey of a robot who struggles with every task that it is asked to perform. The main task is telling a “story” involving one of our groupmates, intended to entertain the judges:

- The first task is a robot being asked to fill two coffee cups with a coffee mug. The robot grabs the coffee mug and attempts this, but then puts all the coffee in only one mug, overflowing and “failing the task”
- Next we ask the robot to play chess and place a chess board in front of it, where it then pushes the chessboard away signifying that it doesn’t know how to play chess
- After this, we give it a marker and place a whiteboard in front of it to try to get it to draw something. It grabs the marker then draws a frowny face on the whiteboard signifying it doesn’t know how to draw well.
- Lastly, we then tell the robot we brought it a fellow robot[laptop] it can play with, it then grabs a pen to press a key on the keyboard to beat “Minecraft”, finally finding something that it is good at.

Every time we verbally ask a robot to perform a task in the presentation, we will cue the robot to respond following the script above by tapping it.
